

Hi-T Pigalerts

Pig & Sphere Signalers Scraper Passage Detectors

Installation Instructions

The models are supplied as standard for mounting on a base to be welded to the line pipe or vessel. Extension pieces for flange mounting up to ANSI Class 2500 are also available.

All standard units require a 1 1/2" (38 mm) dia. access through both the mountings and the line pipe. Special adaptors and smaller diameter triggers are available for retro-fit applications.

Full instructions covering installation, resetting, field adjustment for varying pipe-wall thicknesses and removal under pressure using a jacking bracket are supplied with all Hi-T Pigalerts as appropriate at the time of shipment.
